Drones

The consumer and professional drone segment is growing rapidly. Drones, whether in the form of flying machine or rolling devices, are being used in many segments of the industry, from consumer toys to professional service in agriculture, construction, film and cinematography, energy and safety segments. Motion sensor and imaging solutions are the main and most important contributor to these hardware platforms.

InvenSense is strongly positioned to be the leading provider for all the MEMS inertial sensors needed for the flight control engine, navigation and imaging subsystem of these drones. Our 6-axis, new 7- axis. and 9-axis enable the highest accuracy and stability needed for the drone operation and image stabilization needs.
